The implementation project

- Implementation plan
- The implementation project
- Continuous improvement
- Your staff: System owner
- Our staff: Software engineer, onboarding responsible software engineer
- Professional services
- Support availability

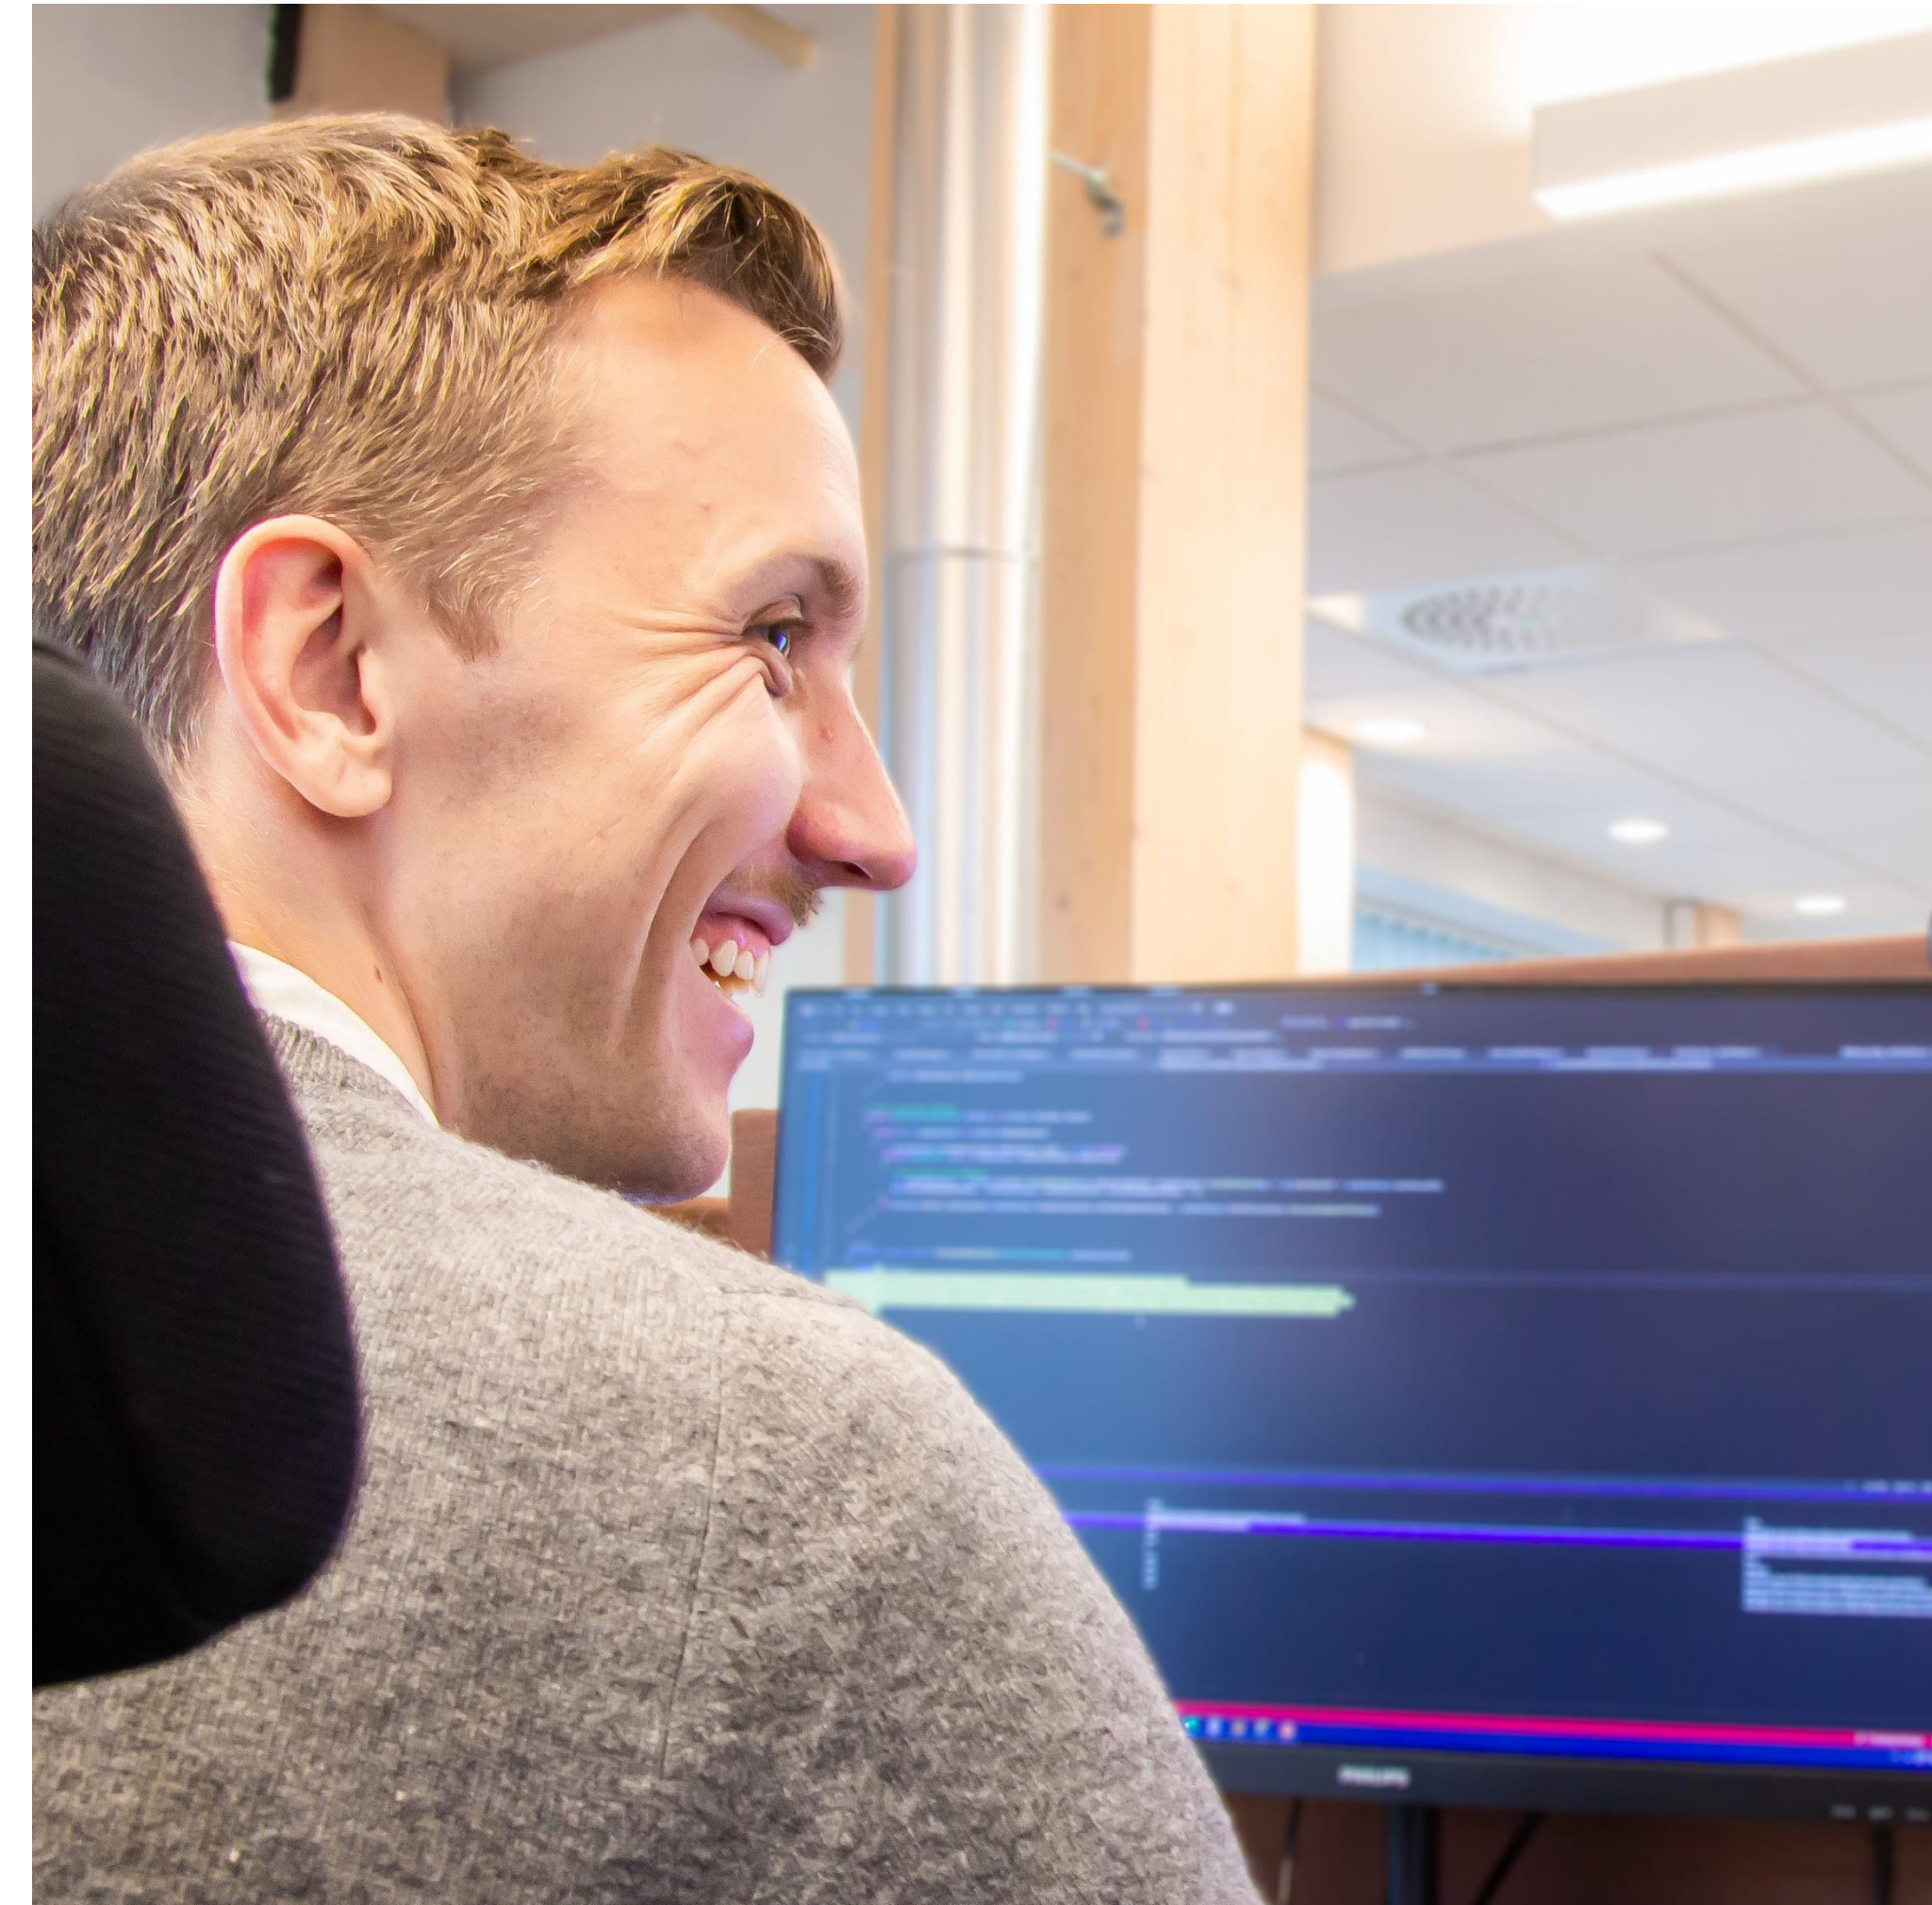

Ongoing

Implementation plan

The sales engineer develops an implementation plan together with you for how you as a customer gets your challenges solved with Ongoing WMS.

After contract is signed, this plan is then used as a basis for the implementation and to make sure of successful onboarding.

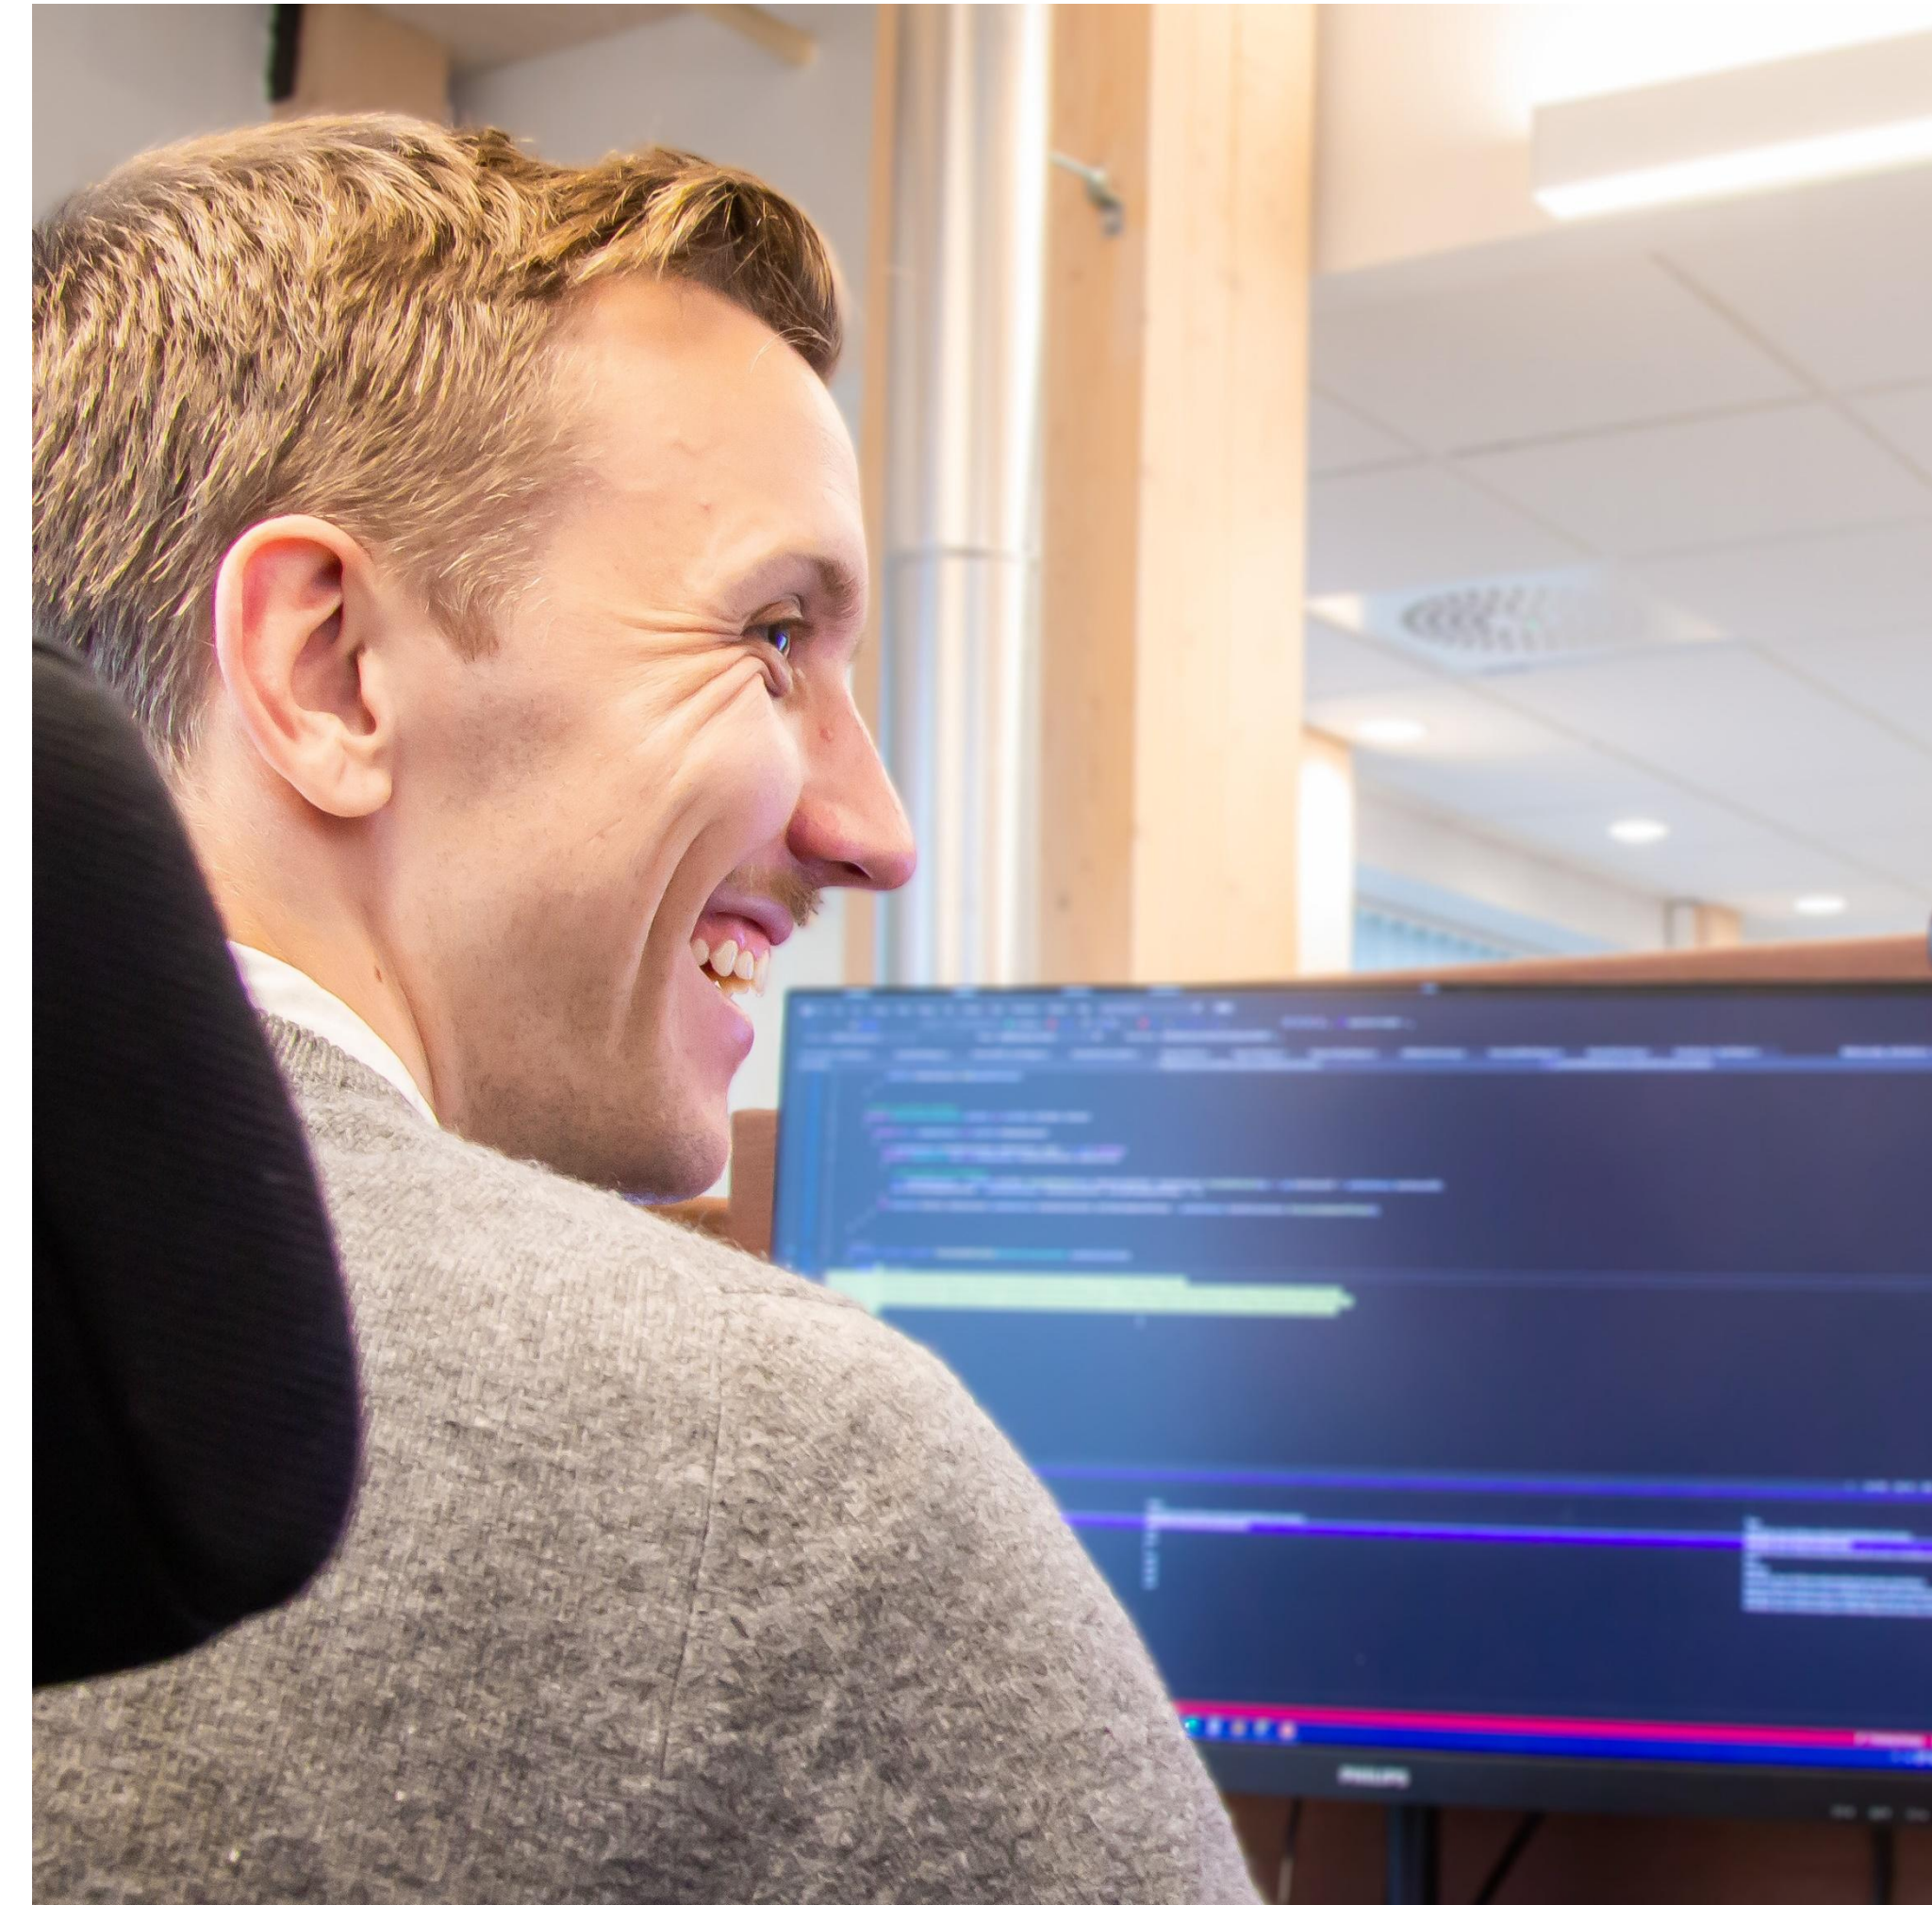

Ongoing

Implementing Ongoing WMS in your warehouse | Ongoing WMS (ongoingwarehouse.com)

Onboarding

Many of the features in the software are possible to configure on your own using our online documentation and smaller warehouses might get started completely without assistance.

We also offer remote onboarding services to help you configure, develop and get started with the software to meet more complex needs. Is on site visits required it has to be agreed in advance.

Implementing Ongoing WMS in your warehouse | Ongoing WMS (ongoingwarehouse.com)

Continuous improvements

Analyze, improve and iterate

Minimize unrealized investments and risk.

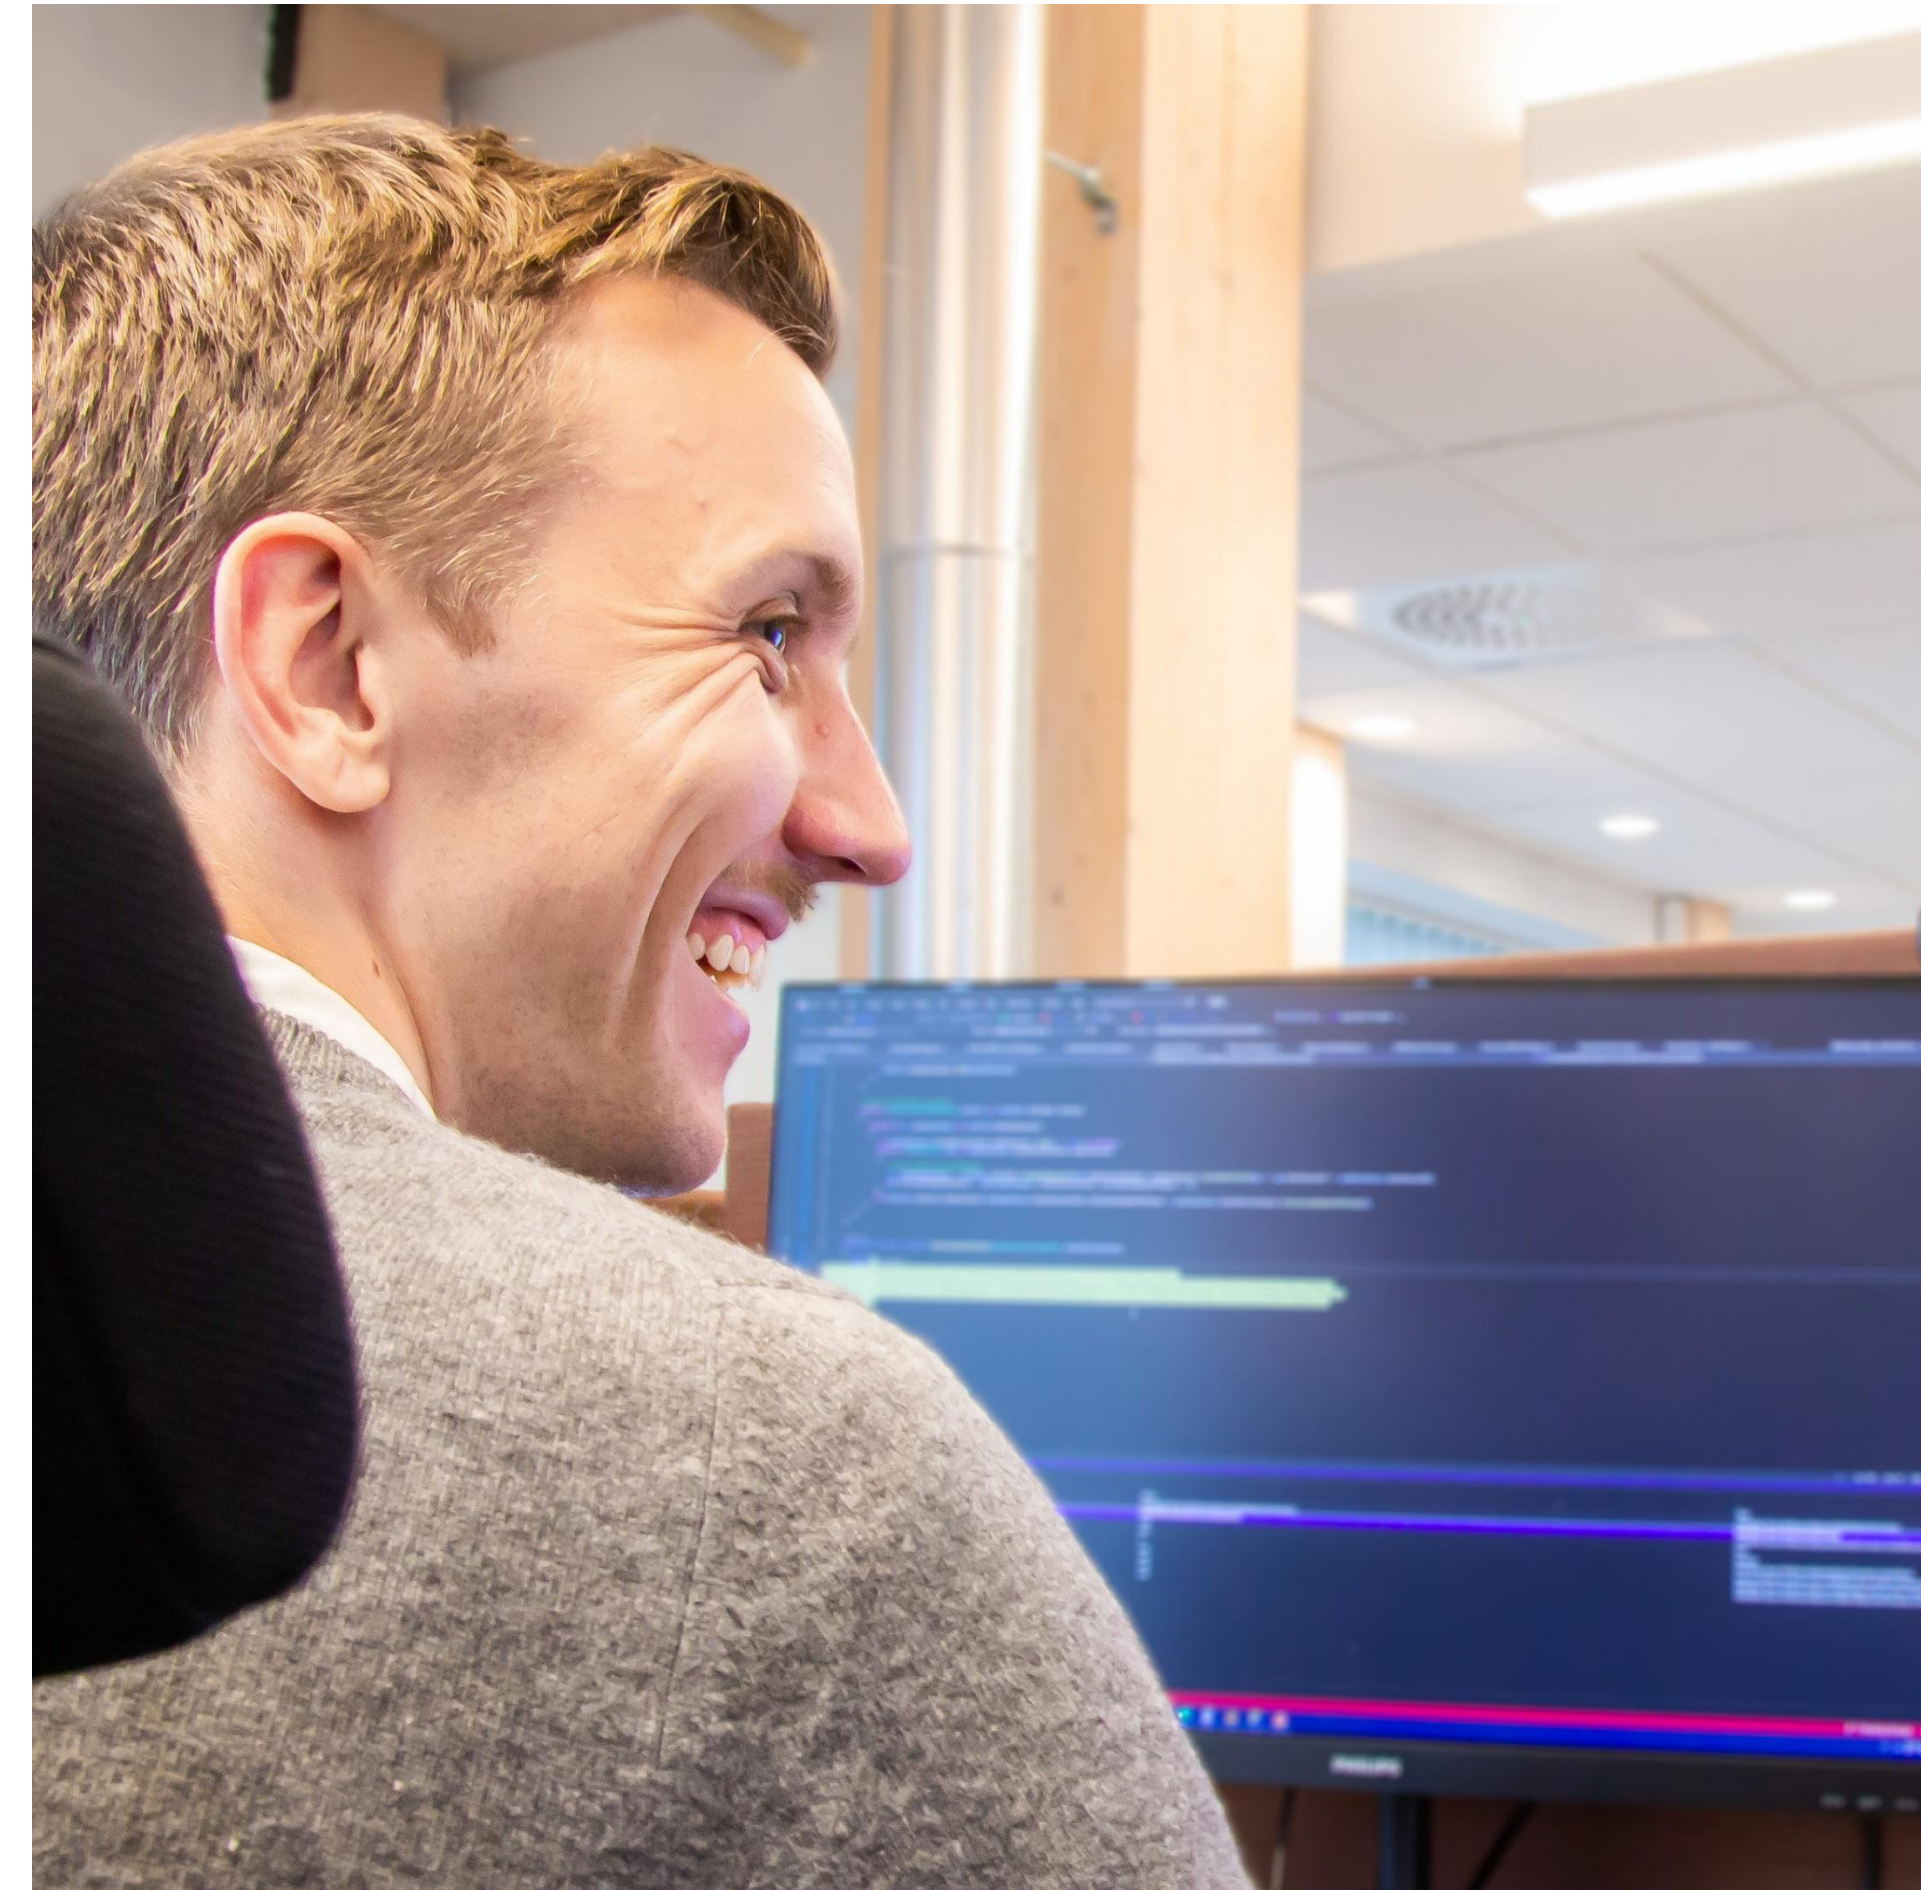

First setup

- Try to start as easy as possible. With one goods owner or just as efficient as previous implementation.

Continuous improvements

- Continuously analyze how you can improve your process.
- Realize small improvements.
- Repeat.

Ongoing

Your staff: System owner

An employee in your organization who will work with the warehouse management system should be appointed as system owner. It is preferable that this employee also has knowledge of your other Logistics IT services.

The responsibility of being the system owner is sometimes shared between an IT role and an engineer/logistics role.

During an implementation, this role might also contain project management. The system owner is then responsible for the implementation project together with our software engineer. For bigger implementation you might want to consider appointing a separate project manager.

Ongoing

Our staff: Software Engineer, Onboarding

Ongoing's organization is focused on its customers. You are appointed a single point of contact for efficient communication and management. We call this role a Software Engineer, Onboarding.

Your system owner works closely with our engineer. Our engineer will work with your company remotely throughout implementation, operation and continuous improvements serving as a single point of contact.

The software engineer works in a team with other software engineers specialized in onboarding customers. The team continuously transfer knowledge and help each other serve our customers. Additionally, the expertise of specialized engineers can be used on demand by the teams.

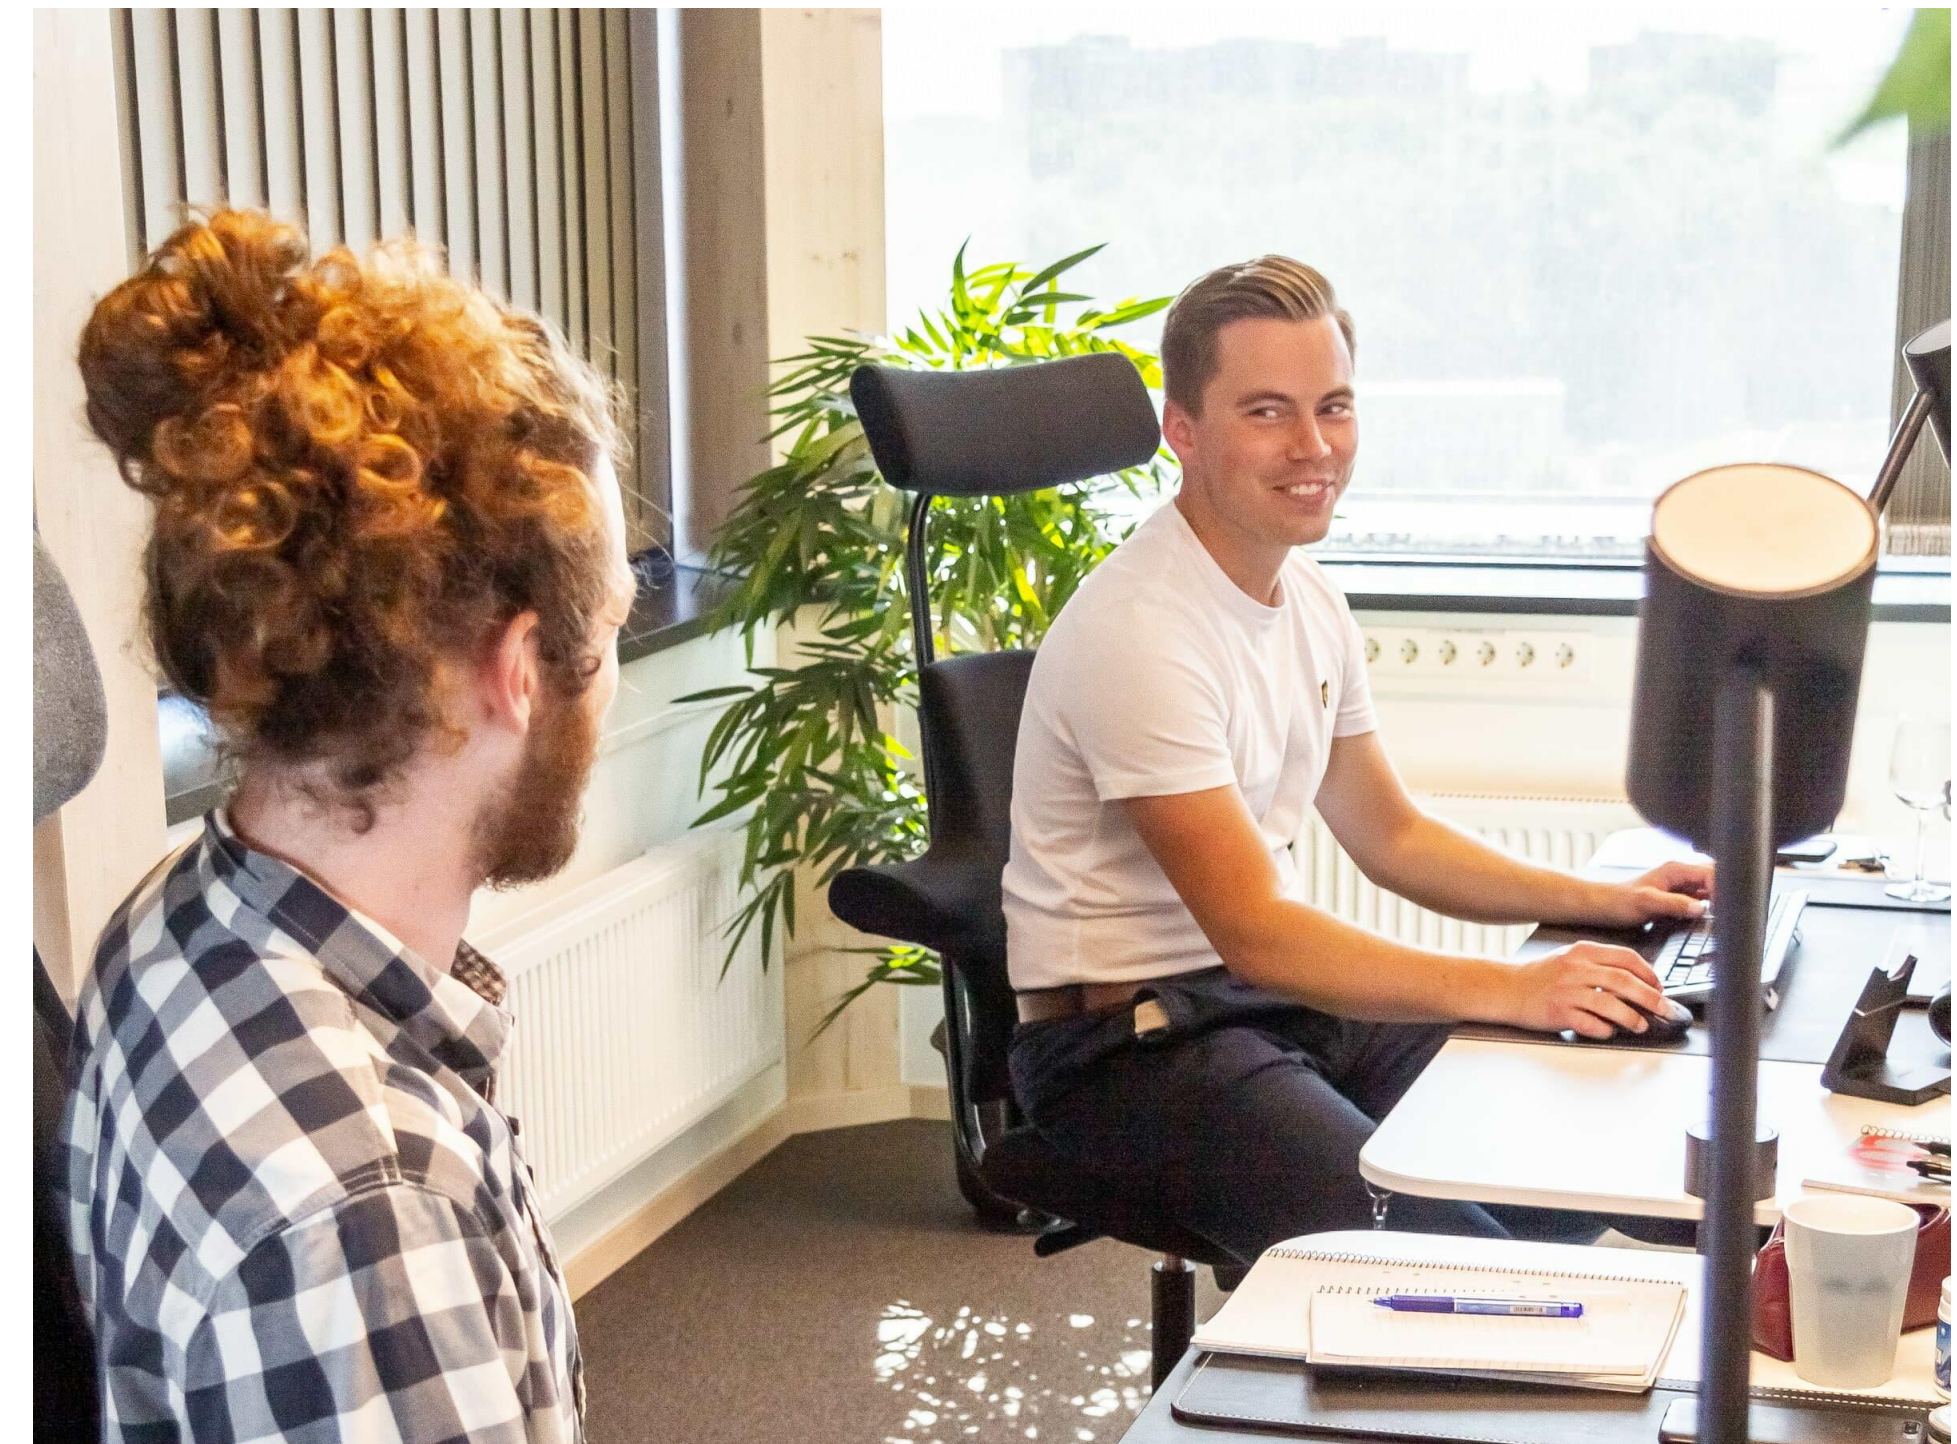

Ongoing

Professional services and continuous improvement

Once onboarding is completed we continuously move customers from our software engineers in the onboarding team to our software engineers within professional services. This boosts effective knowledge transfer and redundancy for you as a customer. There will always be a couple of engineers knowing your particular setup.

You will here receive a dedicated engineer. Continued remote contact with our engineer when needed drives continuous improvements and knowledge transfer. The engineer can take assistance from other engineers in his team for your bigger projects.

Ongoing

Support availability

Software engineers can be booked for hourly services, remote or in exceptional cases on site.

- Support is paid by the hour.
- The support is open weekdays 8.00 – 17.00 (closed for lunch 11.30 - 12.30) Swedish time. The support is closed during Swedish holidays.
- Extended support is offered 17.00-21.00 Monday through Thursday at double hourly rate. Exceptions may occur.
- Additional time can be booked on request to an additional cost.
